The camel stores food in its hump

This camel lives in the Sahara desert. It has not had anything to eat for a long time.

When it rains, plants grow and the camel can eat all it wants. Its hump grows and becomes stiff and tall.

The camel stores food in its hump

When the rain stops the scorching heat of the sun shrivels the plants.

The camel has to live on the food stored as fat in its hump until it finds some plants to eat.
