# A bulb grows into a flower

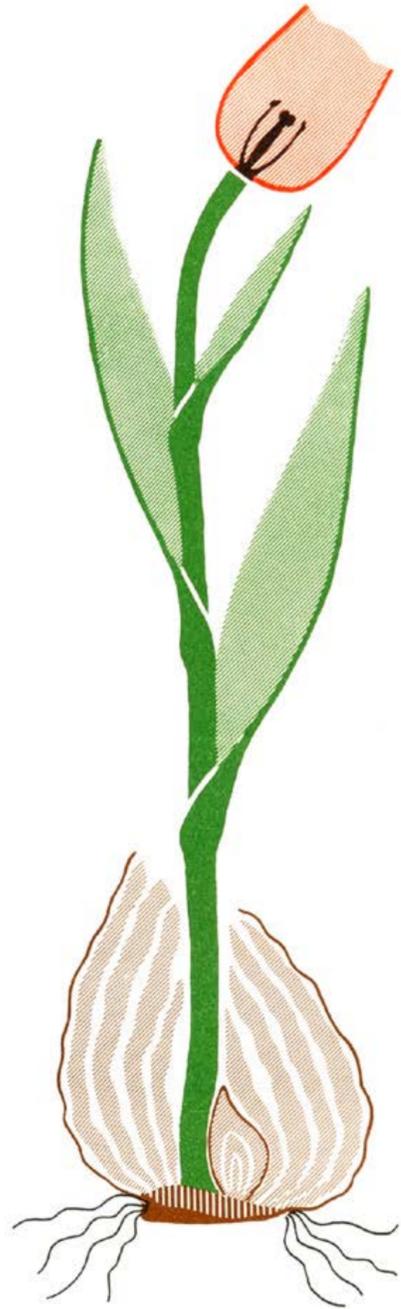

Here is a bulb in December. The tiny flower and leaves are already formed inside the tulip bulb. Their food comes from the layers of the bulb.

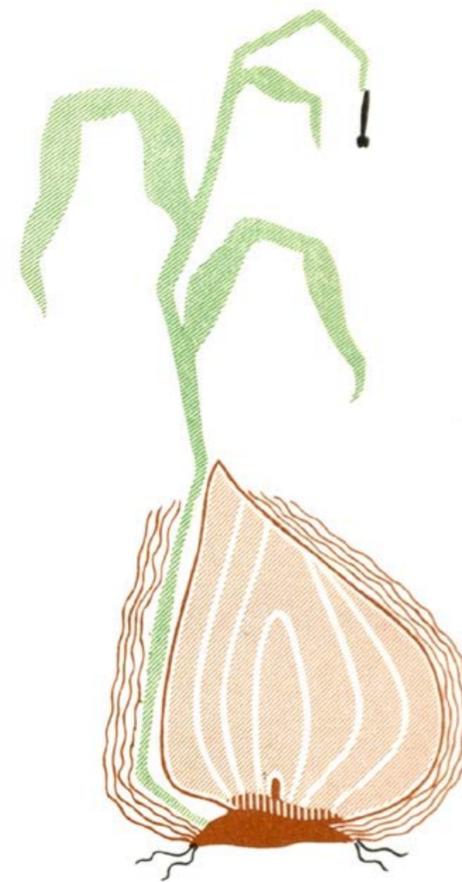

By March roots have grown to bring food water from the soil. Green leaves appear above the ground.

# A bulb grows into a flower

In May the flower opens.

By July the flower is dead and the leaves fade. Inside the shrivelled skin of the old bulb a new one forms.
